

Thermoforming Solutions Ltd are pleased to announce that Charles Greenwood has joined our organisation as Deputy Managing Director, he will initially be responsible for all technical and engineering matters.

Charles brings a wealth of knowledge to Thermoforming Solutions from many aspects of the plastics industry. From extrusion to thermoforming, from machine design to machine build. Charles has over 25 years in the Plastics Industry, working initially in the prestigious Metal Box R & D centre at Wantage developing 'cutting edge' technologies such as the multi-layer oxygen barrier sheet for the Lamipac project, then into engineering and production management.

For the past 14 years he has specialised in project engineering, from machine automation and modification to complete factory and machine moves, design and build of bespoke machines and electrical control panels, also new plant start-ups, employing all staff and contractors, providing training, procedures and strategic advice. He is accustomed to heading up large teams, both within the UK and around the world.

He has worked extensively on most extrusion, vacuum and thermoforming equipment.

Charles has often worked with Thermoforming Solutions in the past on various contracts, so it is a major benefit that he has now joined the organisation on a permanent basis.

Thermoforming Solutions Ltd can now offer our customers even more expertise confirming that we can meet all of our customer needs both in technical as well as commercial solutions.
